

Combination lock 1157

Patented functions according
DE 50 2010 004 511.2

The 1157 lock is a simple yet sophisticated **single - user** lock.

It has a **mechanical automatic blurring function** that is executed every time the door is opened and closed.

The code is reset manually via an opening aid. The 1157 is available in various installation positions.

Example of use: A user, e.g. in office management, is assigned a locker and can freely select the numerical code and change it individually at any time.

single - user
